

MEGHANA K R

Angular Developer | Bengaluru, India

+91 9606437105 • mkr60015@gmail.com • github.com/mkr60015-dotcom

Portfolio: mkr60015-dotcom.github.io/Dev_Portfolio

TECHNICAL SKILLS

Frontend	Angular (v14+), TypeScript, JavaScript (ES6+), HTML5, CSS3, SCSS, Angular Material, RxJS, Responsive Web Design
Backend & APIs	REST API integration, JSON, Postman, API error handling and state management
AI Tools	Claude (Anthropic), ChatGPT (OpenAI), Cursor, GitHub Copilot — used for code generation, refactoring, debugging, test scaffolding and documentation
Tools & Platforms	Git, GitHub, VS Code, Jira, Chrome DevTools, npm, Angular CLI
Practices	Agile / Scrum, component-driven development, code reviews, cross-browser debugging, performance optimisation, problem solving

PROFESSIONAL EXPERIENCE

Associate Software Engineer — Autoverse Mobility Pvt Ltd

Feb 2024 – Present

Bengaluru, India

- Develop and maintain customer-facing and B2B web applications using Angular, TypeScript, JavaScript, HTML5, CSS3 and SCSS.
- Build responsive, reusable UI components and integrate REST APIs with robust loading, empty and error states.
- Developed complete request management workflows covering request creation, editing, tracking and cancellation.
- Implemented item-level request edit, delete, lock and cancellation features with status-based validation rules.
- Developed full order cancellation and item-level order cancellation workflows, including eligibility checks by order status.
- Built order tracking, booking management, job card management and quote approval functionality end to end.
- Implemented wallet integration, promotional offers, catalogue search and multi-parameter filtering.
- Created dynamic UI workflows using sidebars, bottom sheets, popups and modal interactions for complex multi-step journeys.
- Developed the Vehicle Registration Decoder and Find My Car features that resolve a vehicle to its exact fitment data.
- Use Claude, ChatGPT and Cursor daily to accelerate component scaffolding, refactoring and debugging.
- Collaborate with backend, QA and product teams in Agile sprints; track work and defects in Jira.

Associate — Wipro Limited

Apr 2023 – Dec 2023

- Worked on enterprise application support and delivery, building foundations in web technologies and structured software processes.
- Recognised as **Best Performer, December 2023** for consistency, ownership and quality of delivery.

PROJECTS

All projects are showcased with live links on my portfolio: mkr60015-dotcom.github.io/Dev_Portfolio/#projects

Autoverse Partner Portal

<https://test.partner.autoversemobility.in/>

Angular-based B2B ordering platform used by garages to source genuine spare parts. Implemented parts catalogue search with multi-parameter filtering, the full request lifecycle (create, edit, item-level lock/delete, cancel), order and return tracking, digital warranty certificates, wallet-backed payments and an in-app training content module. Built the dynamic sidebars, bottom sheets and modal flows that drive the multi-step ordering journey, and integrated the REST APIs behind quote approval and job card management.

Autoverse Mobility Website

<https://www.test.autoversemobility.in/>

Corporate marketing website introducing Autoverse's genuine spare-parts platform, leadership team and business solutions. Built responsive, reusable page sections and a consistent design system across breakpoints, with attention to layout stability, accessibility of interactive elements and page-load performance.

Manufacturers Details

<https://test.autoversemobility.in/manufacturers-details.html>

Onboarding page for auto component manufacturers, explaining cataloguing, fitment data management, order fulfilment and analytics. Developed the content architecture and responsive layout so manufacturers can move from understanding the offering to submitting an onboarding enquiry in a single scroll.

Insurance

<https://test.autoversemobility.in/insurance.html>

Page presenting Autoverse's claims workflow for insurance companies, walking through the journey from claim approval to genuine-parts delivery at the repairing garage. Implemented the stepped workflow visualisation and responsive sections that make a multi-party process readable on mobile.

Fleet Owners

<https://test.autoversemobility.in/fleet-owners.html>

Page outlining fleet management benefits — genuine parts, fast delivery, order tracking and dedicated account support. Built comparison-style benefit sections and enquiry call-to-actions aimed at fleet operators evaluating a parts supply partner.

Distributors

<https://test.autoversemobility.in/distributors.html>

Autoverse Glide lubricant distributor program page covering the garage-first distribution model along with stock and margin support. Developed the program breakdown, territory and margin messaging sections, and the distributor sign-up flow within a fully responsive layout.

Autoverse Warranty

<https://test.autoversemobility.in/autoverse-warranty.html>

Consumer-facing page explaining the digital Autoverse Warranty Certificate issued by partner garages for repairs done with genuine parts. Built the certificate explanation and verification journey so a vehicle owner can understand coverage and check the authenticity of a certificate they have received.

EDUCATION

Bachelor of Engineering — Information Science & Engineering

2022

Adichunchanagiri Institute of Technology (AIT), Chikkamagalur, Karnataka
